

## Improvements to the Web Portal

Marshfield Labs has made improvements to the web portal. Highlights of the enhancements included in the new release on August 26, 2009:

- When ordering a Maternal Serum Screen (AFP-1, AFP-3, AFP-4) or Cystic Fibrosis Test (CFDNAD), a series of questions will need to be answered, eliminating the use of a separate paper form for these tests.
- Using the Test Directory feature while in the Test Order process: previously if you tried to use the Test Directory while placing an order, the information just entered into the order would have been lost. Now the Test Directory will open in a separate browser window.
- For Miscellaneous supply orders: the description you type will display on the confirmation page as well as under the description column on the View Ordered Supplies page.
- Histology charge logs searching allows up to 30 days at a time (previously searchable time was 7 days).
- View Billing Statement: a PDF icon will now appear on the left when a printable billing statement is available.
- View Courier Pickups: if the courier pickup was cancelled, the status will now display "Cancelled".
- Under Settings:
  - Order Lab Test Settings: a new setting has been added for the ability to always display the print dialog for the Confirmation Page.
  - A new tab has been created: Test Results Settings:
    - Shading of Print Results: you can select to have or not to have shading print on your reports. Shading is used to separate the lines for easier reading.
    - Batch Print: You can customize by choosing to print prelims & final reports or final reports only and to sort by collection date or patient last name.

For more detailed descriptions as well as screen shots of the enhancements, please click on the PDF link below for a complete list of improvements and changes.
